PREFACE

Final results from the 1971 Census of Population and Housing are being released in a series of 14 bulletins covering single and cross-classified characteristics of population and dwellings.

It should be recognised that in processing census data for 13 million persons and 4.5 million households there are innumerable possibilities for error. As in other areas of statistics, much of the effort of statisticians is directed to devising procedures which prevent most errors from occurring or which detect and eliminate those which do occur. Despite such efforts, it is impracticable to eliminate every inaccuracy but special steps such as editing and quality control procedures are taken to measure and control the level of such inaccuracy. Thus while some minor errors and discrepancies may be evident in the final results, it is unlikely that they would have any practical significance in the interpretation of the census data.

A large number of tabulations are being produced for the 1971 Census which, because of their size and complexity, will not be published. A list of the tabulations produced (published and unpublished) and the levels of classification available are shown in this preliminary catalogue. The final edition of the Catalogue of 1971 Census Tabulations (Bulletin 14) will be produced when tabulating has ceased.

State

The term State is used in this catalogue to refer also to the Northern Territory and the Australian Capital Territory.

Section (of State)

"Major urban" denotes all urban centres with a population of 100,000 or more; for example, Major Urban in Victoria equals Urban Melbourne-Geelong, in South Australia, Urban Adelaide only. All other urban centres with a population of 1,000 or more are included in "Other urban". The balance of the population (other than "migratory") is classified as "rural".

Statistical Divisions

These are regions in each State characterised by identifiable social and/or economic links between the inhabitants and economic units within them under the unifying influence of one or more major towns or cities.

Capital City Statistical Division

This relates to the Statistical Division for the State Capital Cities of Sydney, Melbourne, Brisbane, Adelaide, Perth, Hobart and is used also in tabulations to refer to the Proposed Greater Darwin area in the Northern Territory and the Canberra Statistical District (A.C.T. part) in the Australian Capital Territory.

Local Government Areas (L.G.A.'s)

These are as constituted at 30 June 1971 and do not take account of subsequent boundary changes.

Collector's Districts (C.D.'s)

Some 22,000 Districts were designed for the 1971 Census as a basis for the distribution and collection of census forms. Collector's districts are the smallest geographic units for which tabulations are available and are used as "building blocks" to provide statistics for larger areas such as local government areas, urban centres, statistical divisions or any areas which can be defined in terms of component C.D.'s or L.G.A.'s.

Electoral Divisions

The Divisions referred to are Commonwealth Electoral Divisions as determined at the 1968 redistribution of seats for the House of Representatives. Additional tables are currently available for the new electoral divisions as determined in the 1974 redistribution of seats for Western Australia and the Australian Capital Territory. Each census collector's district has been allocated to an electoral division and in those cases where boundaries do not coincide the C.D. has been allocated to the electoral division in which the greater part of the C.D. is located.

Journey to Work Study Zone

In the Population Census people are enumerated according to place of residence. In the 1971 Census a processing operation was performed which provided information on workplace. Tabulations could then be produced on the characteristics of employed persons by residence (origin) and workplace (destination) thereby producing a Journey to Work indicator. Only the principal urban centres were included in this study namely each State Capital City, Canberra-Queanbeyan, Newcastle, Wollongong, Geelong, Gold Coast, Toowoomba, Townsville and Rockhampton.

A more detailed explanation of the methods used at the 1971 Census for defining urban boundaries, statistical divisions and districts can be found in *Bulletin 6 - Population and Dwellings in Local Government Areas and Urban Centres*. A complete set of maps showing boundaries of statistical divisions, districts, local government areas and the principal urban centres is available in *Bulletin 13 - Maps*. Maps showing collector's district boundaries for the Capital City statistical divisions, statistical districts, Ballarat, Bendigo, Townsville, Gold Coast, Toowoomba, Rockhampton, Launceston and Darwin are available on request. C.D. maps for other areas are available for examination in any office of the Bureau of Statistics.

Supply of Published Tabulations

Users who wish to acquire copies of tabulations shown in this catalogue as published in the series of Census Bulletins are encouraged to purchase copies of the Bulletins. The complete series of 1971 Census of Population and Housing Publications is listed at the end of this catalogue together with pricing and distribution arrangements.

Requests for limited extracts from the Census Bulletins will be met by photocopy and clerical extraction in the same way as for unpublished tabulations.

Supply of Unpublished Tabulations

Enquiries concerning the supply of data from any of the unpublished tabulations should be directed to:

The Commonwealth Statistician,
Attention: Population Census Branch,
CANBERRA. A.C.T. 2600

or to the office of the Bureau of Statistics in each State Capital City and Darwin.

Most unpublished tabulations are in the form of computer print-out or held on magnetic tape in the form of tabulation matrices. Users who request cross-tabulations should be familiarised with the format of these tabulations if only segments of multi-dimension tabulations are needed. In a tabulation with 4 variables e.g. A x B x C x D the order in which these variables are printed is D and C, A, B, i.e. the first printed page would present D and C for A₁, B₁ followed by A₁, B₂ A₁, B_n; then A₂, B₁, A₂, B₂ A₂, B_n etc.

As resources for providing these tabulations are limited and restricted to photocopy or clerical extraction, it would be appreciated if enquirers would specify their requirements precisely particularly with respect to multi-dimension tables where all variables or all geographic levels are not required.
